

ERD explanation

- A location is able to have 1 or more statistics / data. For example: The *Location* Rotterdam Noord *has Statistics* about drug problems **and** *Statistics* about theft, but the *data* drug problems is only about Location Blijdorp.
- Statistics has the attributes: Value (in %), Years (2006-2011) and the primary key StatisticID. An example of StatisticID would be: CarTheft_Blijdorp for car theft in Location Blijdorp.
- Location has the attributes: Region (Noord), Location_name (Blijdorp) and the primary key LocationID (Noord_Blijdorp).
